Helpful Information

The proper way to show a dilution is how many parts of the bleach (usually one) are to be diluted to how many parts of water.

1:9 is 1-cup bleach mixed with 9-cups water = 10 total cups
-or-
1 part bleach mixed with 9 parts water = 10 total parts

Cleaning should always be followed by a thorough rinsing with fresh water. Proper rinsing will prolong the life of the material.

**Percentage of bleach references amount of bleach in entire solution*
