

PERSONAL  
PROTECTIVE  
EQUIPMENT (PPE)

### LEVEL 1 MEDICAL TEXTILE

**Typical Environments for Usage: Basic Care, Standard Hospital Medical Unit**

- Meets ANSI/AMMI PB70 Standard
- Used for MINIMAL risk situations
- Provides a slight barrier to small amounts of fluid penetration
- Single test of water impacting the surface of the gown material is conducted to assess barrier protection performance.

**Please contact Customer Service for inventory availability**

## MAYER FABRICS GOWNS CARE1-002 | Level 1 Medical Textile

**62.5" Width**

CHARACTERISTICS	TEST METHOD	PERFORMANCE
Barrier Classification	AAMI PB70:2003	Level 1
Weight oz/yd <sup>2</sup>		3.2
Spray Impact	AATCC 42	1.4
Suter Hydrostatic	AATCC 127	18-20 cm

100% Polyester

PROTECTIVE  
EQUIPMENT (PPE)

### LEVEL 2 MEDICAL TEXTILE

**Typical Environments for Usage: Blood draw from a vein, Suturing, ICU, Pathology lab**

- Meets ANSI/AAMI PB70 Standard
- Used for LOW risk situations
- Provides a barrier to larger amounts of fluid penetration through splatter and some fluid exposure through soaking
- Two tests are conducted to assess barrier protection performance:
  - Water impacting the surface of the gown material
  - Resistance to water pressure

**Please contact Customer Service for inventory availability**

## MAYER FABRICS GOWNS CARE2-004 | Level 2 Medical Textile

**60.5" Width**

CHARACTERISTICS	TEST METHOD	PERFORMANCE
Barrier Classification	AAMI PB70:2003	Level 2
Weight oz/yd <sup>2</sup>		3.2
Spray Impact	AATCC 42	0.3
Suter Hydrostatic	AATCC 127	24 cm

100% Polyester
